5	Up arrow - press to navigate up or to increase volume
6	Down arrow - press to navigate down or to decrease the volume
7	Back - press to go back to previous selection

Setting up the remote control

- Remove the plastic tab that extends past the bottom edge of the remote control. This tab protects the battery. The remote control will not work until it is removed.

Setting up the frame:

- 1 Pull out the stand to place the frame.

- 2 Rotate the stand to position the frame vertically or horizontally, then adjust the stand.

- 3 Plug the AC power adapter into the frame's DC power connector and into an AC power outlet.

- 4 Slide the Power On/Off switch to the **ON** position to turn on the frame. The INSIGNIA logo is displayed for several seconds, then the frame automatically shows a slideshow of pictures stored in internal memory (when no memory card or USB device is present). If a memory card or USB device is present, the frame shows a slideshow of pictures stored on the memory card or USB device.

Viewing pictures on a memory card or USB device

- Insert a memory card or USB device into one of the available memory slots or the USB port. A slideshow of pictures from the memory card or USB device automatically starts to play.

Caution: Memory cards fit into the card slots in one direction only. Do not force a memory card into a slot. The card should fit snugly when inserted correctly. Some cards require an adapter to fit correctly. For more information on supported memory cards, see "Specifications" in your *User Guide*.

For more information about using your NS-DPF8TR digital picture frame, including playing music and videos and setting up power saving functions, see your *User Guide*.

Six-month limited warranty
